

Work Queue Monitor (WQM) is a document management solution that enables scanned/faxed documents to be routed to specific queues for review. From WQM, you can associate documents to patients and visits, making them available with the patient's chart. This job aid provides an overview of how to use Work Queue Monitor.

To log in to WQM from the AppBar or OneChart applications page, click the **CPDI Work Queue Monitor** icon:

Below is an overview of the WQM workflow:
